## SUMMARY

---

Data Engineer with 3+ years of experience building cloud-native data pipelines and analytics infrastructure. Proficient in designing and maintaining ETL/ELT pipelines on AWS (Glue, S3, Lambda) and Azure (Azure Data Factory, Databricks, Synapse), with strong expertise in Python, PySpark, and SQL. Experienced in implementing data quality checks, dimensional modeling, and collaborating with cross-functional teams to deliver production-grade data solutions that align with governance and compliance standards.

## TECHNICAL SKILLS

---

**Cloud & Data Services:** AWS (Glue, S3, Lambda, Redshift), Azure (Azure Data Factory, Databricks, Synapse, ADLS), Snowflake

**Languages & Processing:** Python (Pandas, NumPy, PySpark), SQL, Java, Bash

**Pipeline & Orchestration:** Apache Airflow, dbt, Apache Spark, PySpark, AWS Glue, Azure Data Factory

**Data Modeling & Warehousing:** Star & Snowflake Schemas, Dimensional Modeling, ETL/ELT, Lakehouse Architecture

**Data Quality & Governance:** Automated validation checks, dbt tests, pipeline monitoring, compliance controls

**DevOps & Databases:** Docker, Git, CI/CD, Azure DevOps, PostgreSQL, MySQL, SQL Server

**BI & Visualization:** Power BI, Tableau, DAX

## PROFESSIONAL EXPERIENCE

---

### Epsoft Technologies Inc.

Data Engineer, Dallas, TX

June 2025 – December 2025

- Built and maintained AWS Glue ETL jobs to ingest candidate and verification data from Amazon S3, transforming and loading it into Amazon Redshift for recruiter dashboards and downstream ML scoring, reducing data latency by 35%.
- Designed event-driven ingestion pipelines using AWS Lambda and Amazon S3 triggers to process real-time recruiter activity events, improving feature freshness for ML models and reducing pipeline lag by 40%.
- Designed dimensional data models in Amazon Redshift for candidate profiles, skill assessments, and verification records, while implementing automated data quality checks within AWS Glue jobs that reduced bad-data incidents by 30%.
- Managed Amazon S3 data lake storage across raw, processed, and curated zones, and implemented data governance practices including partitioning strategies and access controls to support compliance requirements.

### Association of American Medical Colleges

Research Data Analyst, Washington, DC

July 2023 – March 2025

- Automated a manual data acquisition process by developing a Python web scraper API to collect publicly available data and integrate it with internal Oracle databases, reducing manual processing by approximately 30 hours.
- Designed statistical experiments using ANOVA to evaluate differences across organizational segments and support research analysis.
- Optimized SQL queries and PL/SQL procedures in Oracle Database, reducing query execution time by 40%.
- Migrated legacy Excel/VBA reporting to Power BI using an on-premises data gateway, enabling automated scheduled refreshes across data from more than 150 medical schools, reducing report generation time by 80% and eliminating manual data preparation.
- Collaborated with analysts and research teams to gather reporting requirements and deliver scalable data solutions aligned with AAMC's reporting and compliance standards.

### BlackRock

Data Analyst, San Francisco, CA

February 2023 – May 2023

- Assisted in the end-to-end development of applications using Agile methodologies by contributing to requirements gathering, analysis, design, development, testing, and team collaboration throughout the software development lifecycle.
- Wrote SQL queries and Python scripts to extract, transform, and prepare data for reporting and analysis, supporting business users with data-driven insights.

- Generated capacity planning reports using Python libraries including Pandas, NumPy, SciPy, and Matplotlib, while performing data profiling and data quality checks before loading data into the data warehouse.
- Used SQL, MySQL, and Tableau to analyze data, resolve data quality issues, create reports, track marketing KPIs, and analyze user survey results, contributing to an 18% improvement in customer communication processes and a 38% increase in landing page conversion rates.

## Macro Software Solutions

Data Analyst, India

August 2018 – July 2021

- Used Azure Data Factory to orchestrate scheduled data movement between on-premises SQL Server and Azure Blob Storage, supporting cloud migration initiatives for reporting workloads.
- Leveraged Azure Blob Storage as a staging layer for raw customer data, enabling structured ingestion workflows and reducing manual file-handling across multiple client data feeds.
- Developed and maintained SQL pipelines and data models in SQL Server to deliver business metrics and reports for executive leadership, and created Power BI dashboards to support business decision-making.
- Performed data cleaning, transformation, and statistical analysis using Python (Pandas, NumPy, Matplotlib, and SciPy), contributing to a 32% improvement in customer conversion insights.
- Developed customer segmentation models and analytical reports that improved sales effectiveness by 12%.

## PROJECTS

---

### E-Commerce Sales Pipeline | Python, dbt, Snowflake, Apache Airflow, Power BI

- Ingested e-commerce data into Snowflake, modeled fact and dimension tables with dbt, including built-in data quality tests, orchestrated daily pipeline refreshes with Airflow, and surfaced KPIs through a Power BI dashboard.

### Job Market Analyzer | Python, HuggingFace, spaCy, Claude API

- Developed a Python pipeline that parsed PDF resumes using Claude Sonnet and aggregated job postings from multiple APIs. Applied named entity recognition models from Hugging Face and spaCy to extract skills, seniority, and job requirements, then ranked candidate-job matches using heuristic scoring methods.

## EDUCATION

---

### M.S. in Artificial Intelligence

University of the Cumberlands

In Progress

### M.S. in Computer Science

University of California, Riverside

Sept 2021 – Dec 2022

### B.Tech in Computer Science Engineering

GITAM University, Hyderabad

June 2016 – July 2020
